

# DOWNED ASD(1) (1)

A Breakthrough by Cole EverDark

DOWNED Autism Caused by the use of down while conceiving As Well as being around the drug while air born long term symptoms of this rare type of autism can be read as follows.

- Lack of energy
- Lack of focus
- 16 hours sleep
- Low heart rate
- Sensory deprivation

When conceiving a child on the drug known as down the effect on the child's brain would be lack of brain development in the temporal lobe as well as nervous system prefrontal cortex limbic system. Also, the person could have autism Asperger's

Developmental errors would be

Autism would take shape in the form of infinite exhaustion also extreme lack of focus troubles breathing and shortness of breath coughing. Another thing to be expected would be that the memory ability would be lacking as the overall halted brain development. would mean that memories would be hard to retrieve if not impossible depending on the current level of stimulation in the brain. Depending on lung development would also be slowed or even halted. Meaning developing autoimmune diseases would be a lot easier

Treatment

Treatment for DOWNED ASD can be provided in stimulation as the chance of psychosis is next to none and for one to get psychosis one would have to be overstimulated to have psychosis. The problem with downed ASD is the fact of next to no stimulation in the brain. Taking medications that increase stimulation heavily can cause Great effects making days livable as without most people would only be able to stay in bed. Another thing this would help with is movement as impairment in the circulatory system from birth would be able to slowly repair itself.

If treatment is removed one could be expected to suffer infinite and extreme lethargy lack of focus is stimulation to the brain. another aspect that would have to be looked at would be heart rate as one's heart rate should stay around 80 to 100 bpm people with this form of autism would make your heart function at 60 bpm every day unless some other medication would be found or provided.
